Projects

Business Website for Nail Salon (On-going)   September 2023- present
Sole Developer (Front-end and Back-end)
- Developed a 5-page business website using React and JavaScript, focusing on aesthetics and user experience
- Implemented an interactive gallery and ensuring cross-platform compatibility for accessibility
- Developing a feature-rich reservation system with features like confirmation emails, reminders, and reporting
- Employing SEO optimization strategies through keyword research and authoritative content
- Self-hosted on Hostinger and tackled the project incrementally

Self-Hosted Network-Attached Storage (NAS) and Media Server   August 2023 – present
Solo Project
- Implemented a NAS system using Proxmox and TrueNAS, focusing on secure and private file storage and media serving
- Overcame challenges in web exposure and file permissions by configuring Cloudflare and Linux settings
- Automated media file request-to-view process within 10 minutes using custom scripts
- Achieved 2.5 TB storage capacity and high-speed file transfers up to 30 Mbps via SMB
- Successfully served over 15 web applications with multi-layer security, providing access to 5 users
- Utilized Docker, Docker Compose, and GitHub for environment setup and version control
